CALIFORNIA RICE SUPPLIES FOR 1938-39 OVER MILLION BAGS IN EXCESS OF  
1937-38 UTILIZATION

Supplies of California rice for the 1938-39 season will exceed last year's utilization of rough rice for milling, seed, feed, and exports by over a million bags if November prospects for a record production are realized, states the Federal-State Market News Service.

Utilization of California rice during the 1937-38 season dropped to approximately 3,750,000 bags compared with more than 4,500,000 bags the previous season. Smaller exports of milled rice, a sharp reduction in the quantity of rough rice fed and the lack of an outlet to southern mills largely accounted for the decreased utilization. Shipments of milled rice to insular possessions increased materially but distribution to the domestic consumer trade was slightly under that of the previous season.

Prices of California-Japan at San Francisco averaged about 65 cents per 100 lower during the 1937-38 season than in 1936-37. Extra fancy grades of head rice sold at the beginning of the season (October 1, 1937) at \$3.20 per 100, advanced to \$3.25 in mid-October and to \$3.50 late in January; prices remained at this level during the rest of the season.

High Yields on Large Acreage Produce Record Crop

Average yields of nearly 32-1/2 bags per acre on next to the largest acreage since 1927 produced a record rice crop in California this year. Preliminary estimates placed the 1938 acreage at 135,000 acres compared with revised estimates of 130,000 acres in 1937 and 138,000 acres in 1936. Yields averaged 32.4 bags per acre, according to the November 1 official estimate, giving a total production of 4,374,000 bags, the largest on record and about 150,000 bags above the previous record crop in 1936.

Carry-over stocks of old rice at the first of October were also larger than for any previous year for which records are available. Stocks in warehouses were reported at 477,390 bags while mills held 69,474 bags, making a total of 546,864 bags against only 220,936 bags a year earlier and 484,179 bags 2 years ago, when stocks were large. Adding the crop to the carry-over gives total supplies of 4,920,864 bags of rough rice for the 1938-39 season compared with 4,315,936 bags for 1937-38 and 4,706,979 bags for 1936-37. If an allowance equal to that of last season is made for seed and local feeding, approximately 4,480,000 bags will be available this season for milling or for export or carry-over into the next crop year. Millings and exports in 1937-38 accounted for only 3,305,000 bags, or about a million bags less than are available this season.

### Utilization of California Rice Lower in 1937-38 Than in 1936-37

Utilization or disappearance of California rough rice during the 1937-38 season was about 765,000 bags below the relatively large distribution of the previous year. Seed requirements were slightly smaller but this decrease was about offset by increased exports of rough rice. Nearly 200,000 bags less rice was milled by California mills in 1937-38 than in 1936-37, while Southern mills took no rough rice because of relatively high prices of California-Japan rice. In 1936-37 about 120,000 bags of California-Japan were shipped to southern mills during the period when labor difficulties cut off California shipments to Hawaii and Puerto Rico. The principal decrease in the use of California rice was for feed. Local trade agencies estimate the quantity of rice used for feed during the 1937-38 season at about 250,000 bags compared with the record use of about 700,000 bags in 1936-37 when supplies of barley and corn were low and prices of these grains were relatively high. Utilization for feed, while apparently only about a third as large as in 1936-37, was much larger than normal but consisted principally of rice of poor storage or milling quality. Much of this rice, resulting from weather damage, was not harvested until the spring months and sold at sharp discounts under rice of good milling quality.

### Mill Receipts Increased in 1937-38

California mills took in more rough rice during 1937-38 than in 1936-37 despite the smaller millings. Receipts in 1937-38 totaled 3,413,191 bags compared with 3,400,267 bags in 1936-37. Millings dropped to 3,271,125 bags largely as a result of the smaller amounts ground directly into brewers rice. Milling was relatively heavy in October and November when distributors were replenishing stocks following an adjustment in prices of milled rice to a new crop basis. Activity slackened in December when southern rice markets weakened but reached a seasonal peak in January when quotations on southern Blue Rose advanced and distributors of California-Japan purchased supplies for several months ahead. April and May millings were restricted by labor difficulties which closed most of the California mills. Following settlement of labor difficulties milling operations were about seasonal during the remainder of the season. August and September millings, however, were considerably below those of the corresponding months in 1937 when unusually large amounts were ground for export and for the brewing trade under an industrial program to dispose of burdensome stocks.

Millings of rough rice during 1937-38 produced 1,649,475 bags of head rice, 79,719 bags of second heads and screenings, and 573,474 bags of brewers rice. During the previous season production of head rice amounted to 1,483,794 bags, of second heads and screenings 128,379 bags and of brewers rice 745,442 bags. Production of head rice during the 1937-38 season included a larger portion of mixes for the Puerto Rican trade than in the previous season. The diversion of broken rices to the manufacture of these mixes largely accounts for the relatively small percentage of screenings obtained in 1937-38. Production of brewers rice was above the average of other recent years but fell below that of 1936-37 since somewhat smaller quantities of rough rice were ground directly into brewers rice.

### Distribution of Milled Rice Largest in Recent Years

Distribution of California milled rice increased sharply and was the largest in recent years. Shipments of head rice alone amounted to 1,616,866 bags

compared with 1,465,474 bags the previous season and 1,518,697 bags two years back. Materially heavier takings by insular possessions accounted for the increased distribution since both exports and shipments to the domestic trade were smaller than in 1936-37. Hawaiian takings of California-Japan amounted to approximately 738,000 bags against 533,000 bags a year ago when labor difficulties on the Pacific Coast restricted shipments to that Island. Hawaiian takings of Oriental rice fell off materially and Honolulu receipts of southern rice amounted to only 38,785 bags compared with 70,277 bags during the previous year.

Shipments of California rice to Puerto Rico were reported by the State Harbor Commission at 535,570 bags, the largest for the 10 years for which comparable data are available and compared with only 365,800 bags a year ago. California-Japan represented about 21 percent of the total United States rice shipments to Puerto Rico during 1937-38 against 18 percent during 1936-37. In recent seasons California shipments have ranged from 17.6 percent to 24.3 percent of the total United States movement to Puerto Rico.

In contrast to the sharp increase in the export of southern rice, foreign purchases of California rice dropped to 83,405 bags against 260,250 bags in 1936-37. California-Japan prices were mostly above an export basis throughout the year. Almost half of the total exports moved in October and consisted of rice sold during the previous season. A large portion of the exports during the remainder of the year went to Cuba and consisted chiefly of rice containing off-colored grains selling at substantial discounts under regular table grades.

Domestic takings of California head rice were somewhat smaller than in recent years. Deducting exports and shipments to insular possessions, totaling 1,356,770 bags from total mill shipments of 1,616,866 bags, indicates a domestic utilization of 260,096 bags of head rice. During the 1936-37 crop year 272,905 bags were utilized in this country. With the exception of about 75,000 bags shipped to western cereal manufacturers, the bulk of the domestic distribution was on the West Coast. Smaller takings in this area were attributed largely to increased usage of southern rice on which price declines were greater than on California-Japan. The simple average of weekly quotations on extra fancy California-Japan at San Francisco was 43 cents per 100 over extra fancy Blue Rose at New Orleans for the 1937-38 season against only 18 cents during the 1937-38 season, 14 cents in 1935-36, and 5 cents per 100 in 1934-35. The price relationship during May was particularly favorable for use of southern Blue Rose on the West Coast, with California-Japan selling at the highest premium over Blue Rose since December, 1927.

Distribution of second heads and screenings increased to 114,536 bags in 1937-38 against 51,883 bags the year previous. Included in the 1937-38 shipments were about 34,000 bags purchased by the Federal Surplus Commodities Corporation for relief purposes. The greater portion of the disappearance, however, was in the utilization of screenings in mixes or for conversion into brewers rice. Only 220 bags of screenings were exported during the year, all during September 1938. At the close of the season September 30 stocks of second heads and screenings at mills totaled 72,870 bags compared with 107,687 bags a year earlier.

Shipments of brewers rice increased to a new high peak for recent years and amounted to 673,394 bags compared with 601,774 bags last season and 257,205

bags 2 years back. Lighter importations of foreign brewers rice, together with heavy purchases by domestic industries early in the season when corn grits were still relatively high were factors in the increased movement. Shipments were fairly uniform throughout the year but a large portion of the sales was made early in the season. Toward the close of the crop year increased competition developed from corn grits and southern brewers rice while brewing activity was somewhat under that of a year earlier. Stocks of brewers rice at mills at the close of September totaled only 54,829 bags against 154,749 bags a year earlier.

Imports of foreign rice decreased materially during the 1937-38 season. Imports at San Francisco, while comprising only about half of the total United States imports, dropped to 35,886 bags. This compares with 66,143 bags during the previous season, 67,235 bags 2 years back, and 137,154 bags during the 1934-35 crop year. Low prices of California-Japan were a factor in the smaller importations, but the increased usage of American Patna by the Chinese trade on the Pacific Coast also contributed to the decrease. The bulk of the imports at San Francisco was of Oriental rice mostly from China and Hongkong but included also some rice from Japan and the Philippines. Other imports were mostly from Italy.

Imports of broken rices at San Francisco dropped to slightly less than 1,000 bags during 1937-38 compared with 32,660 bags in 1936-37 and 66,320 bags in 1935-36. Low prices of California rice and the unsettled political situation in the Orient tended to restrict this trade.

#### Distribution of California Rice Aided by Lower Prices

Increased distribution of California rice was accomplished at somewhat lower prices. Quotations on extra fancy California-Japan head rice double sacked f.o.b. docks at San Francisco ranged from \$3.20 to \$3.50 per 100 during the 1937-38 season with an average of \$3.42 for the entire crop year. During 1936-37 prices ranged from \$3.50 to \$4.20 and averaged \$4.07 per 100. The low of \$3.20 per 100 for the 1937-38 season was at the beginning of the period. Prices advanced to \$3.25 at the middle of October and held unchanged until late January when there was a further advance of 25 cents per 100. This level was maintained throughout the remainder of the crop year. Fancy, extra choice, and choice grades sold at discounts of 5 cents, 10 cents and 15 cents respectively, under extra fancy grades. At the opening of the 1938-39 season, prices were adjusted sharply downward with extra fancy Japan quoted at \$3 per 100 double sacked f.o.b. dock San Francisco, the lowest price to the domestic and insular trade since May 1933.

Prices of screenings opened the 1937-38 season at \$2.90 for extra fancy grades, dropped to \$2.40 early in January and held at this level until the beginning of the 1938-39 season when prices declined to \$2 per 100 to domestic buyers and \$1.65 to the export trade. The opening price of \$2.60 on extra fancy brewers rice was maintained until October 25 when quotations were reduced to \$2.40 with a further downward adjustment on April 4 to \$2.15 per 100. Prices remained at this level until the beginning of the 1938-39 season when they declined to \$1.75 per 100 at San Francisco, the lowest point since April, 1933.

As in other recent years, California rough rice prices fluctuated largely with milled rice quotations and the fixed differentials agreed upon by grower and miller representatives. At the beginning of the 1937-38 season growers received \$1.35 per 100 f.o.b. country shipping points for No. 1 paddy yielding 50 pounds

of head rice and with other grades varying around 1 cent for each pound difference in head rice yields. At the close of January prices were advanced to \$1.51-1/2 with the differential for other grades increased to 1.4 cents for each pound difference in yields. Quotations remained unchanged but mostly nominal throughout the remainder of the crop year. At the beginning of the 1938-39 season, prices of No. 1 paddy were announced at \$1.23-1/2 per 100 f.o.b. country shipping points with a differential of 1.2 cents for each pound difference in milling yields.

Table 1. - Rice: Acreage, yield and production, California, 1912-38
